DETAILED ACTION

Claims 1-23 were cancelled.

Claims 24-31 are newly added.

Claim Rejections

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 24-31 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over **claims 1-17 of Patent Serial No. 6512263**. Although the conflicting claims are not identical, they are not patentably distinct from each other because independent claim 1 of **Patent Serial No. 6512263** contains all limitations cited in independent claim 24 of present application: a memory comprising a first array and second array that are orthogonal with each other, source/drain regions formed between floating gates of column (first direction), electrical isolation between floating gates and source/drain regions in second direction (isolation between memory cells of adjacent rows including isolation of source/drain regions in said second direction), and electrically conductive strips elongated in second direction (row) and spaced apart in the first direction across and in electrical contact with the source/drain regions. It would have been obvious to one having ordinary skill in the art that the source/drain regions formed in the substrate of present application and **Patent Serial No. 6512263** are discontinuous in the second direction because Claim 1 of **Patent Serial No. 6512263** discloses that the strips of dielectric material elongated in the first direction and extending into the substrate in the spaces between the rows of cells in order to provide electric isolation between the memory cells of adjacent rows including isolation of their source/drain region in the second direction.

When responding to the office action, Applicants' are advice to provide the examiner with the line numbers and page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.

A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) day from the day of this letter. Failure to respond within the period for response will cause the application to become abandoned (see M.P.E.P 710.02(b)).
